SAFETY SECURITY PROTECTION

## Stalwart Doors

# Stalwart Doors

## Certification

The Stalwart door has been developed as an external fire exit door, primarily for business and commercial premises.

The Stalwart door can be constructed to offer protection to G1 or G2 to BS 5051.

## Construction

The door is designed to provide a total steel armour thickness of 4mm. A strengthened flange overlaps the frame, preventing the insertion of forcing tools.

The door is hung in the frame by a full length continuous hinge and features a unique door frame device for maximum security. We recommend that doors open outwards against the line of attack.

The frame is constructed from heavy duty tubular steel section with integral continuous door stop and threshold, doors are made to order and so a wide range of sizes and options can be accommodated.

## Locking

A wide range of locking options are available on Stalwart doors.

## Options

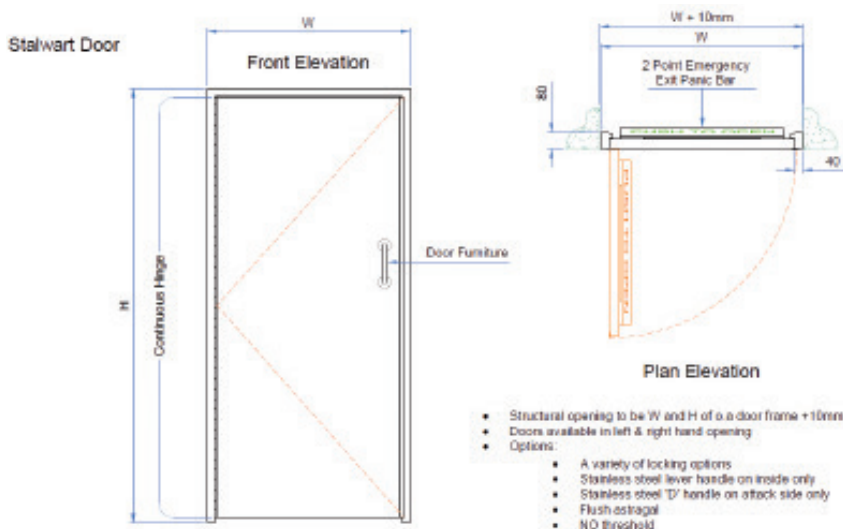

- Single and double door sets are available
- Vision panels with a choice of glazing can be integrated into the door
- Integral alarm contact, tamper proof junction box, ready to wire into existing security system
- Non-standard door sizes
- Non-standard finishes

## Finish

Supplied factory primed as standard, with a wide range of RAL colour options available.

## Site Preparations

The doors are supplied with integral frame fixing points and are designed to be installed into prepared openings made ready for installation.

## FEATURES

- Heavy duty tubular steel frame with integral strengthened door stop and threshold
- Top and leading edges are protected by an armour overlap of door frame interlock
- Mineral fibre core provides thermal and sound insulation
- All doors supplied factory primed. RAL colours available on request

## APPLICATIONS

- Business and commercial premises and high security store rooms
